

# Quick Start Guide

Thank you for choosing Therma. Here's how you get set up in three simple steps:

1. Plug in your hub. You'll know you're online when the globe LED is illuminated in solid red.
2. Set up your location and enter the SN code starting with LHT on the front of your sensor at **dashboard.hellotherma.com/sensors** or via the **Therma mobile app**.
3. Place the sensor inside the equipment you'd like to monitor, away from any fans. The sensor attaches via zip ties and/or double-sided velcro.

Therma has been packaged with environmentally friendly materials,  
including biodegradable packing peanuts made from starch.

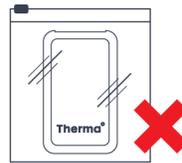

## Don'ts

Don't submerge sensors in water.

Don't place sensors above heat or fire.

Don't put sensors in ziplock bags.

Don't unplug Hub.
